

Mineralys Therapeutics Reports Second Quarter 2023 Financial Results and Provides Corporate Update

- Continue enrolling subjects in ongoing pivotal Advance-HTN trial of lorundrostat, for the treatment of patients with uncontrolled or resistant hypertension –*
- On track to initiate planned Phase 3 pivotal Launch-HTN trial of lorundrostat for the treatment of uncontrolled or resistant hypertension in 2H 2023 –*
- Announced expansion of planned Phase 2 trial of lorundrostat alone and in combination with SGLT2 inhibitor to treat patients with chronic kidney disease (CKD), expect to initiate enrollment in 2H 2023 –*
- Conference call today at 4:30 p.m. ET –*

RADNOR, Pa., Aug. 07, 2023 (GLOBE NEWSWIRE) -- Mineralys Therapeutics, Inc. (Nasdaq: MLYS), a clinical-stage biopharmaceutical company focused on developing medicines to target diseases driven by abnormally elevated aldosterone, today announced financial results for the quarter ending June 30, 2023, and provided a corporate update.

“Our team continued to make significant progress in executing our development strategy for lorundrostat during the first half of 2023. The pivotal development program for lorundrostat to treat uncontrolled hypertension (uHTN) or resistant hypertension (rHTN) is well underway, with enrollment in the Advance-HTN trial ongoing and initiation of the Phase 3 Launch-HTN trial expected in the second half of the year,” stated Jon Congleton, Chief Executive Officer of Mineralys Therapeutics. “Most recently, we announced the decision to expand our planned Phase 2 trial of lorundrostat for treating patients with chronic kidney disease (CKD), which we plan on initiating during the second half of 2023. The role of aldosterone in the progression of CKD is well established. This trial will evaluate the benefit of inhibiting aldosterone production with lorundrostat as a more complete solution and promising approach to treat CKD patients.”

Recent Corporate and Clinical Highlights

- **Enrollment on track for pivotal Advance-HTN trial** – Since initiating patient dosing in the ongoing Advance-HTN Phase 2 trial in April 2023, additional clinical sites have been onboarded and enrollment of subjects is on track. The Advance-HTN Phase 2 trial is evaluating the safety and efficacy of lorundrostat for the treatment of uHTN or rHTN, when used as an add-on therapy to standardized background treatment of two or three antihypertensive medications in up to approximately 300 adult subjects. The topline data from this trial is expected in the first half of 2024.
- **Open-label extension trial for long-term safety exposure** – In mid-2023, the Company initiated an open-label extension trial to obtain additional safety data. All

subjects in the pivotal hypertension program, including the Advance-HTN and Launch-HTN trials, will be given the opportunity to participate in the extension trial.

- **Announced expansion of the Phase 2 trial for lorundrostat in CKD subjects**– In July 2023, the Company announced details of an expanded two-part Phase 2 clinical trial for lorundrostat as a potential therapy to treat patients with Stage 2 to 4 CKD. The trial will now include a proof-of-concept study (Part A) evaluating lorundrostat alone and in combination with an SGLT2 inhibitor in subjects with mild to moderate CKD, estimated glomerular filtration rate (eGFR) 45-90 ml/min/1.73m², with persistent proteinuria despite treatment with an angiotensin-converting enzyme (ACE) inhibitor or angiotensin II receptor blocker (ARB). Part A is designed to evaluate the benefit of lorundrostat on proteinuria in this CKD population. The second part of the trial is a profiling study (Part B), which will characterize the safety profile of lorundrostat in subjects with moderate to severe CKD, eGFR 25-44 ml/min/1.73m², with and without hypertension, despite treatment with an ACE inhibitor or ARB. The trial is expected to start enrolling patients in the second half of 2023.

Key Upcoming Milestones

- **Initiation of the Phase 2 trial of lorundrostat in CKD**– In the second half of 2023, the Company plans to initiate the two-part Phase 2 trial of lorundrostat for the treatment of subjects with CKD. Topline data from this trial are anticipated between the fourth quarter of 2024 and the first quarter of 2025. As an exploratory trial, the Company may conduct interim data analyses at one or more time points.
- **Phase 3 pivotal Launch-HTN trial** – In the second half of 2023, the Company plans to initiate a randomized, double-blind, placebo-controlled Phase 3 trial to evaluate the safety and efficacy of lorundrostat for the treatment of uHTN or rHTN, when used as an add-on therapy to prescribed background treatment of two to five antihypertensive medications in up to approximately 1,000 adult subjects. The topline data from this trial is expected in mid-2025.

Second Quarter 2023 Financial Highlights

Cash, cash equivalents and investments were \$282.8 million as of June 30, 2023, compared to \$110.1 million as of December 31, 2022. The Company believes that its cash, cash equivalents and investments as of June 30, 2023 will be sufficient to allow the Company to fund its planned clinical studies, as well as support corporate operations through mid-2025.

Research and Development (R&D) expenses were \$11.9 million for the quarter ended June 30, 2023, compared to \$5.6 million for the quarter ended June 30, 2022. The increase in R&D expenses was primarily due to increases of \$4.0 million in preclinical and clinical costs, driven by the initiation of the lorundrostat pivotal program in the second quarter of 2023, \$1.3 million in higher compensation expense as a result of additions to headcount and \$1.0 million in clinical supply, manufacturing and regulatory costs.

General and Administrative (G&A) expenses were \$3.9 million for the quarter ended June 30, 2023, compared to \$0.9 million for the quarter ended June 30, 2022. The increase in G&A expenses was primarily due to \$1.4 million in higher compensation expense as a result of additions to headcount, \$1.1 million in higher professional fees associated with

operating as a public company, \$0.3 million of higher insurance expense associated with new director and officer insurance policies and \$0.2 million in higher other administrative expenses.

Total other income was \$3.6 million for the quarter ended June 30, 2023, compared to \$0.0 for the quarter ended June 30, 2022, which was primarily attributable to interest earned during the three months ended June 30, 2023 on the Company's investments in money market funds and U.S. treasuries that began earning interest in the third quarter of 2022.

Net loss was \$12.1 million for the quarter ended June 30, 2023, compared to \$6.5 million for the quarter ended June 30, 2022. The increase was primarily attributable to the factors impacting the Company's expenses described above.

Conference Call

The Company's management team will host a conference call at 4:30 p.m. ET on Monday, August 7, 2023. To access the call, please dial 1-877-704-4453 in the U.S. or 1-201-389-0920 outside the U.S., followed by the conference ID: 13739672. A live webcast of the conference call may be found [here](#). A replay of the call will be available on the [News & Events](#) page in the Investor Relations section of the Mineralys Therapeutics website.

About Hypertension

Having sustained, elevated blood pressure (or hypertension) increases the risk of heart disease, heart attack and stroke, which are leading causes of death in the U.S. In 2020, more than 670,000 deaths in the U.S. included hypertension as a primary or contributing cause. Hypertension and related health issues resulted in an average annual economic burden of about \$130 billion each year in the U.S., averaged over 12 years from 2003 to 2014.

Less than 50 percent of hypertension patients achieve their blood pressure goal with currently available medications. Abnormally elevated aldosterone levels are a key factor in driving hypertension in approximately 25 percent of all hypertensive patients.

About Chronic Kidney Disease (CKD)

CKD, which is characterized by the gradual loss of kidney function, is estimated to affect more than 10% of the global population and is one of the leading causes of mortality worldwide. According to the U.S. Centers for Disease Control and Prevention (CDC), an estimated 1-in-7 (15%) of U.S. adults have CKD. Diabetes and hypertension are responsible for approximately two-thirds of CKD cases. Early detection and treatment can often keep CKD from getting worse. When CKD progresses, it may eventually lead to kidney failure, which requires dialysis or a kidney transplant to maintain life.

About Lorundrostat

Lorundrostat is a proprietary, orally administered, highly selective aldosterone synthase inhibitor being developed for the treatment of uncontrolled hypertension and CKD.

Lorundrostat was designed to reduce aldosterone levels by inhibiting CYP11B2, the enzyme responsible for its production. Lorundrostat has 374-fold selectivity for aldosterone-synthase inhibition versus cortisol-synthase inhibition *in vitro*, an observed half-life of 10-12 hours and demonstrated approximately a 70% reduction in plasma aldosterone concentration in hypertensive subjects.

In a Phase 2, proof-of-concept trial (Target-HTN) in uncontrolled or resistant hypertensive subjects, once-daily lorundrostat demonstrated clinically meaningful blood pressure reduction in individuals with uncontrolled hypertension, in both automated office blood pressure measurement and 24-hour ambulatory blood pressure monitoring. Adverse events observed were a modest increase in serum potassium, decrease in estimated glomerular filtration rate, urinary tract infection and hypertension with one serious adverse event possibly related to study drug being hyponatremia.

About Mineralys Therapeutics

Mineralys Therapeutics is a clinical-stage biopharmaceutical company focused on developing medicines to target diseases driven by abnormally elevated aldosterone. Its initial product candidate, lorundrostat, is a proprietary, orally administered, highly selective aldosterone synthase inhibitor that Mineralys Therapeutics is developing for cardiorenal conditions affected by abnormally elevated aldosterone, including hypertension and CKD. Mineralys is based in Radnor, Pennsylvania, and was founded by Catalys Pacific. For more information, please visit <https://mineralystx.com>. Follow Mineralys on [LinkedIn](#) and [Twitter](#).

Forward-Looking Statements

Mineralys Therapeutics cautions you that statements contained in this press release regarding matters that are not historical facts are forward-looking statements. The forward-looking statements are based on our current beliefs and expectations and include, but are not limited to, statements regarding: the potential therapeutic benefits of lorundrostat; the Company's expectation that aldosterone synthase inhibitors (ASIs) with an SGLT2 inhibitor may provide additive clinical benefits to patients; the Company's expectation that the Advance-HTN and the planned Phase 3 clinical trial of lorundrostat may serve as pivotal trials in any submission of a new drug application (NDA) to the United States Food and Drug Administration (FDA); the Company's ability to evaluate lorundrostat as a potential treatment for CKD; the planned future clinical development of lorundrostat and the timing thereof; and the expected timing of commencement and enrollment of patients in clinical trials and topline results from clinical trials. Actual results may differ from those set forth in this press release due to the risks and uncertainties inherent in our business, including, without limitation: our future performance is dependent entirely on the success of lorundrostat; potential delays in the commencement, enrollment and completion of clinical trials and nonclinical studies; later developments with the FDA may be inconsistent with the feedback from the completed end of Phase 2 meeting, including whether the proposed pivotal program will support registration of lorundrostat which is a review issue with the FDA upon submission of an NDA; our dependence on third parties in connection with manufacturing, research and clinical and nonclinical testing; unexpected adverse side effects or inadequate efficacy of lorundrostat that may limit its development, regulatory approval and/or commercialization; unfavorable results from clinical trials and nonclinical studies; results of prior clinical trials and studies of lorundrostat are not necessarily predictive of future results; our ability to maintain uninterrupted business operations due to any pandemic or future public health concerns; regulatory developments in the United States and foreign countries; our reliance on our exclusive license with Mitsubishi Tanabe Pharma to provide us with intellectual property rights to develop and commercialize lorundrostat; and other risks described in our filings with the Securities and Exchange Commission (SEC), including under the heading "Risk Factors" in our annual report on Form 10-K, and any subsequent filings with the SEC. You are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof, and we undertake no obligation to update such statements to

reflect events that occur or circumstances that exist after the date hereof. All forward-looking statements are qualified in their entirety by this cautionary statement, which is made under the safe harbor provisions of the Private Securities Litigation Reform Act of 1995.
